

LASSAVIRUS GAME

PURPOSE:

remove from the world all the possible causes of Lassavirus.

PREPARATION:

- set on each of five continents the causes of Lassavirus:
2 houses (that represent dirty location)
2 poops (rodent droppings)
2 tomatoes (contaminated food by Lassavirus).
- assigning to each player 5 small cards (in the bag) on which are represented: doctor, medicine, antivirus mask, broom and bin.

HOW TO EXECUTE:

- the players take turns rolling the die. If an odd number comes out, the player draw out of the bag another small card ; if an even number comes out, draw 2 small cards; if the virus comes out, take from the deck a virus paper and puts it on the table showing the color, that correspond with a continent color. These papers represent the presence of the Lassavirus among humans.
- The same player can use his small cards to remove the causes of the virus or the virus itself.

From every continent must be removed first of all the dirty location (placing in the box of the game a broom and a bin, in exchange for a house taken from the board, that the player will keep it to himself); then the droppings (with a mask and a broom in exchange for a poop); finally the contaminated food (with a mask and a bin in exchange for a tomato).

- If the player has already picked a virus paper and he possesses, among his small cards, a doctor and a medicine, he can put in the box the paper itself and the 2 small cards too, receiving 2 sponges of your color.

If instead the player have only one of the two images, he can contribute to the cure of the epidemic putting the small card above the virus paper (that will remain in its place) getting a sponge.

The virus paper can be permanently removed when another player, or himself in another round, will put the second small card above the virus paper. That player will receive a sponge and will put in the box virus

paper and small cards.

- For each continent, the second house, the second poop and the second tomato can be removed only with appropriate small cards and a sponge. The latter is setting above the continent in question.
- If is drawn a virus paper of a specific continent in which there aren't causes of Lassavirus, so on that continent must replace the causes of virus and remove the sponge, returning them to proprietary players.

CONCLUSION:

- the game finish in the moment in which there are on the table 3 virus paper face up, and, in this case, the Lassavirus wasn't won.
- Or the game ends when on the board there aren't causes of the Lassavirus (but 15 sponges).

SCORE:

win the player with the highest score.

2 points for each owned house

3 points for each poop

4 points for each tomato

4 points for each owned sponge but not used

7 points for each sponge on the board
